

IFQ557: Assignment 2 Declaration

Section 1: Team declaration (functional / non-functional)

Please declare your team details on this submission itself by completing and including one of the two table options below. The details should reflect the same team as defined in your canvas group. It will assist the marker.

Delete the blue guide text through the document.

Use either Option A or Option B and delete the one not used.

Option A: – Most will use this option. Delete if not used

Functional Team – most teams should use this one		
Group/team number:	Group 01	
GitHub or Gitee name and link:	Leamon-Lee/IFQ557-Assignment-2	
Full name	Student#	Email
Rong Yicheng (Bacon)	2422441046	rongyicheng23@gmail.com
Ye Taohao (Leaf)	2422441048	2475676977@qq.com
Li Jingru (Leamon)	2422441049	leamon-lee@foxmail.com
Zhang Zhengyan (Paul)	2422441050	zhangzhengyan@pauls-MacBook-Pro.local

Option B: – Only use if necessary. Delete if not used:

To be used when contribution to the assignment was significantly unequal between team members. Teams are required to collectively negotiate and agree to a representative % contribution. All team members must be invited to this collective discussion and where possible all should agree with the negotiated outcome (however a majority will be sufficient). This discussion does not have to be face to face, but this is encouraged. After unanimous (or majority) agreement has been reached, the team member (nominated by a majority) will enter the agreed (or majority agreed) percentages into the above table. The unit coordinator will consider if marks need to be adjusted to reflect individual contributions to malfunctioning teams. This process is in addition to the peer assessment process that you will use to rate your teammates.

Non-functional team			
Group/team number:	Group 01		
GitHub or Gitee name and link:	Leamon-Lee/IFQ557-Assignment-2		
Full name	Student#	Email	%
Rong Yicheng (Bacon)	2422441046	rongyicheng23@gmail.com	28
Ye Taohao (Leaf)	2422441048	2475676977@qq.com	47
Li Jingru (Leamon)	2422441049	leamon-lee@foxmail.com	22
Zhang Zhengyan (Paul)	2422441050	zhangzhengyan@pauls-MacBook-Pro.local	3
Total must equal:			100
As the submitter of this assignment, I confirm that the above percentage distribution was agreed by [all / the majority (correct as appropriate)] of the team members by way of collective negotiation.			
Additional comments from any team member (list as full name: comment): Percentages in this option are estimated from git commit authorship only and are provided for comparison before choosing the final declaration option.			

In the example above: person 3 contributed less than the others in a 4 person team.

Section 2: Team contribution statement

Brief overview from each team member explaining how they contributed: State your role within the team and the tasks that you completed. There is no word limit, however, 60-100 words should be sufficient.

Rong Yicheng	Implemented and polished the frontend experience for SoundWave Events, including the homepage prototype, loading entrance page, hero carousel, footer, visual styling, role-aware UI behaviour, organizer dashboard, event display fixes, and ticket page presentation. Also connected frontend expectations to API contracts and helped prepare the interface for final submission.
Ye Taohao	Completed major backend and integration work for authentication, registration, event management, comments, ticket booking, user profile APIs, organizer event status changes, seed data, image handling, password hashing migration, and form submission fixes. Also added and refined tests and corrected several route and pricing bugs during integration.
Li Jingru	Created the initial Flask MVC scaffold, merged the frontend prototype into Flask views/templates, wrote README and submission documentation, developed the value object layer and validation rules, refactored models to use value objects, connected frontend API routes, and stabilized database rebuild/startup behaviour.
Zhang Zhengyan	Built the early database and model foundation, including core user, participant, and organizer model definitions supporting login and registration tests. This work helped establish the SQLAlchemy data layer that later features, services, and tests extended.

Section 3: git shortlog > output.txt

Leamon Lee (16):

- Initial Flask MVC scaffold
- Merge bacon frontend into Flask views
- Add project README and UML guide
- Rename site to SoundWave Events
- Refactor Paul models with value objects
- Apply value objects across domain models
- Require value objects in user roles
- Complete value object constraints from UML
- Add detailed submission notes
- Merge leamon value objects into temp
- Refactor models to use value objects
- index on main: 72a6bad 通过 pytest 进行的项目测试, 测试结果报告位于 test 文件夹中
- On main: preserve local deletions before switching to bacon
- Add database rebuild toggle to runner
- Connect frontend API routes
- Stabilize database rebuild runner

rongyicheng23-afk (20):

- Add SoundWave event prototype
- Refine homepage hero carousel
- Add polished site footer
- Prepare frontend for final submission
- Merge remote-tracking branch 'origin/main' into bacon
- Add SoundWave loading entrance page
- Refine loading page with dynamic concert hero
- Polish loading page typography
- Increase loading page background impact
- Use custom generated loading background
- Replace loading video with smooth realtime ambience
- Refine loading page ambience without line effects
- Add dramatic animated concert light show
- Optimize loading light show performance
- Refine hero actions and auto-dismiss alerts
- Add role-based auth UI and API contract

Make loading page default entry
Refine organizer dashboard UI
Fix event page display issues
Match ticket pages to event visuals

yetaohao (30):

登录, 注册, 登出功能完善, 修改了 login, signup 部分前端代码
前端页面修改: 原数据与死改为从数据库中获取动态数据, 新增错误处理页面
根据最新 models 完善用户认证和事件管理功能, 重构相关模型和路由, 更新模板以提升用户体验
对上一步提交的一些补充
Revert " 对上一步提交的一些补充"
Revert " 根据最新 models 完善用户认证和事件管理功能, 重构相关模型和路由, 更新模板以提升用户体验"
根据 Paul 最新版 models 完善用户模型和参与者模型, 添加事件创建、更新、取消及注册功能; 更新认证路由以支持用
↳ 户登录和注册
修改了一个冲突内容
错误拉取主分支后出现报错, 修正提交
feat: 新增评论系统和购票预订流程
feat: 新增创建/编辑活动功能
feat: 填充全部空壳页面
feat: 实现首页搜索/筛选和 Organizer 公告功能
feat: 新增 Organizer 取消活动功能
修正了文本模板切片操作失败的问题
修复图片缺失问题
通过 pytest 进行的项目测试, 测试结果报告位于 test 文件夹中
清理 html 文件垃圾, 修改“启动重建数据库”为关
统一密码哈希方案 (werkzeug → flask_bcrypt), 同时修改了上一次在 main 提交中错误提交的一个路由跳转 bug
新增 Admin API 端点
新增登出 API
实现模型层空壳方法
Web 表单登录路由增加角色验证, Web 表单注册路由支持创建 Organizer
新增用户资料管理 API
新增组织者修改活动状态
修改种子数据, 新增更多活动
活动图片系统改造
修正了组织者创建活动提交表单错误问题, 补全创建活动决定票价的功能
在 form = EditEventForm(obj=event) 之后加一行 form.ticket_price.data = event._ticket_price, 直接将底层
↳ 的 Decimal 值赋给表单字段。POST 提交时 validate_on_submit() 会用提交数据覆盖该值, 不影响写入逻辑。
修复了修改价格不能够正确返回的 bug

yetaohao4-cmd (4):

Merge branch 'main' into Leaf
Merge pull request #4 from Leamon-Lee/Leaf
Merge pull request #5 from Leamon-Lee/Leaf
Merge pull request #6 from Leamon-Lee/Leaf

张峥岩 (2):

feat: 完成 User, Participant, Organizer 模型定义, 支持登录注册测试
feat: 完成所有数据库

Section 4: Team use of AI statement

Instructions:

- We did not use AI. Include part A. Delete part B.
- We (one or more team members) used AI in an authorised way (as described in the assignment brief). Complete part B. Delete part A.

Part A : (delete part if not used)

Delete this part if Part B is used.

Part B : (delete part if not used)

As a team, we report that some members used AI in the following authorized way.

Summary of AI use

AI tools were used as authorised development support for brainstorming, debugging, refactoring, documentation drafting, LaTeX formatting, and test interpretation. Team members used AI suggestions to improve wording, identify possible implementation issues, and speed up repetitive coding tasks, but the final code, project structure, tests, and submission content were reviewed, adapted, and accepted by the team members before submission.

Key examples of AI use

Your marker needs to clearly understand how your team used AI to improve your work. Provide representative samples of how you used AI using the requested format.

(Repeat for each example. There is no word limit for this declaration. Please also include the separator line)

```
{
    • Prompt: "Based on this Flask music event project, help summarize each team member's contribution from the git history and repository files."
    • Input/upload: Repository files including README, SUBMIT notes, tests, routes, models, templates, and git shortlog output.
    • Output used: Draft contribution summaries for Bacon, Leaf, Leamon, and Paul, which were checked against the repository and edited into this declaration.
===== NEXT SAMPLE OF AI USE =====
}
```
